Chapter 1

Namespace Index

1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

ParticleMass	7
PhotonMapper	7

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

ParticleTrack	9
Photon	12
PhotonHit	15
RadiatorCell	16
SiPM	19
TrackingVolume	20

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

/data/lhcb/users/tat/ARC_Simulation_Reconstruction/apps/RunARC.cpp	23
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/ParticleMass.h	24
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/ParticleTrack.h	24
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/Photon.h	25
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/PhotonMapper.h	26
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/RadiatorCell.h	26
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/SiPM.h	27
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/TrackingVolume.h	27
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/ParticleMass.cpp	27
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/ParticleTrack.cpp	28
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/Photon.cpp	28
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/PhotonMapper.cpp	28
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/RadiatorCell.cpp	29
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/SiPM.cpp	29
/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/TrackingVolume.cpp	29

Chapter 4

Namespace Documentation

4.1 ParticleMass Namespace Reference

Functions

- double [GetMass](#) (int PID)

4.1.1 Detailed Description

[ParticleMass](#) is a namespace storing all the particle masses in a static map

4.1.2 Function Documentation

4.1.2.1 GetMass()

```
double ParticleMass::GetMass (
    int PID )
```

Get the particle mass

Definition at line 8 of file ParticleMass.cpp.

4.2 PhotonMapper Namespace Reference

Functions

- double [PhotonMirrorDistance](#) (const [Photon](#) &photon, const [RadiatorCell](#) &radiatorCell)
- void [TracePhotonToMirror](#) ([Photon](#) &photon, const [RadiatorCell](#) &radiatorCell)
- void [TracePhotonToDetector](#) ([Photon](#) &photon, [RadiatorCell](#) &radiatorCell)
- void [TracePhoton](#) ([Photon](#) &photon, [RadiatorCell](#) &radiatorCell)

4.2.1 Detailed Description

[PhotonMapper](#) is a namespace containing the functions for mapping photons from their emission point to the detector plane

4.2.2 Function Documentation

4.2.2.1 PhotonMirrorDistance()

```
double PhotonMapper::PhotonMirrorDistance (
    const Photon & photon,
    const RadiatorCell & radiatorCell )
```

Find the distance between the photon and the mirror

Definition at line 11 of file PhotonMapper.cpp.

4.2.2.2 TracePhoton()

```
void PhotonMapper::TracePhoton (
    Photon & photon,
    RadiatorCell & radiatorCell )
```

Trace photon from emission point to detector and register detector hit

Definition at line 36 of file PhotonMapper.cpp.

4.2.2.3 TracePhotonToDetector()

```
void PhotonMapper::TracePhotonToDetector (
    Photon & photon,
    RadiatorCell & radiatorCell )
```

Trace photon from mirror to detector plane and register detector hit

Definition at line 31 of file PhotonMapper.cpp.

4.2.2.4 TracePhotonToMirror()

```
void PhotonMapper::TracePhotonToMirror (
    Photon & photon,
    const RadiatorCell & radiatorCell )
```

Trace photon from emission point to mirror

Definition at line 22 of file PhotonMapper.cpp.

Chapter 5

Class Documentation

5.1 ParticleTrack Class Reference

```
#include <ParticleTrack.h>
```

Public Types

- enum [CoordinateSystem](#) { [CoordinateSystem::GlobalDetector](#), [CoordinateSystem::LocalRadiator](#) }

Public Member Functions

- [ParticleTrack](#) (const [Vector](#) &Momentum, int ParticleID)
- void [TrackThroughTracker](#) (const [TrackingVolume](#) &InnerTracker)
- void [ConvertToRadiatorCoordinates](#) (const [RadiatorCell](#) &Cell)
- void [TrackThroughRadiatorCell](#) (const [RadiatorCell](#) &Cell)
- [Photon](#) [GeneratePhotonFromAerogel](#) () const
- [Photon](#) [GeneratePhotonFromGas](#) () const
- std::vector< [Photon](#) > [GeneratePhotonsFromAerogel](#) () const
- std::vector< [Photon](#) > [GeneratePhotonsFromGas](#) () const
- [Photon](#) [GeneratePhoton](#) (const [Vector](#) &Entry, const [Vector](#) &Exit, double n_phase) const
- double [Beta](#) () const

5.1.1 Detailed Description

Definition at line 18 of file ParticleTrack.h.

5.1.2 Member Enumeration Documentation

5.1.2.1 CoordinateSystem

```
enum ParticleTrack::CoordinateSystem [strong]
```

Enum with the two coordinate systems used

Enumerator

GlobalDetector	
LocalRadiator	

Definition at line 29 of file ParticleTrack.h.

5.1.3 Constructor & Destructor Documentation

5.1.3.1 ParticleTrack()

```
ParticleTrack::ParticleTrack (
    const Vector & Momentum,
    int ParticleID )
```

Construct a charged particle with momentum and ID at the interaction point

Parameters

<i>Momentum</i>	Particle momentum, in GeV
<i>ParticleID</i>	PDG particle ID convention

Definition at line 12 of file ParticleTrack.cpp.

5.1.4 Member Function Documentation

5.1.4.1 Beta()

```
double ParticleTrack::Beta ( ) const
```

Get the particle speed, in units of c

Definition at line 117 of file ParticleTrack.cpp.

5.1.4.2 ConvertToRadiatorCoordinates()

```
void ParticleTrack::ConvertToRadiatorCoordinates (
    const RadiatorCell & Cell )
```

Convert to local radiator coordinates

Definition at line 34 of file ParticleTrack.cpp.

5.1.4.3 GeneratePhoton()

```
Photon ParticleTrack::GeneratePhoton (
    const Vector & Entry,
    const Vector & Exit,
    double n_phase ) const
```

Generate Cherenkov photon

Parameters

<i>Entry</i>	point of radiator
<i>Exit</i>	point of radiator
<i>n_phase</i>	Index of refraction for phase velocity

Definition at line 104 of file ParticleTrack.cpp.

5.1.4.4 GeneratePhotonFromAerogel()

```
Photon ParticleTrack::GeneratePhotonFromAerogel ( ) const
```

Generate Cherenkov photon from aerogel

Definition at line 58 of file ParticleTrack.cpp.

5.1.4.5 GeneratePhotonFromGas()

```
Photon ParticleTrack::GeneratePhotonFromGas ( ) const
```

Generate Cherenkov photon from gas

Definition at line 67 of file ParticleTrack.cpp.

5.1.4.6 GeneratePhotonsFromAerogel()

```
std::vector< Photon > ParticleTrack::GeneratePhotonsFromAerogel ( ) const
```

Generate Cherenkov photons from aerogel according to Frank-Tamm relation

Definition at line 76 of file ParticleTrack.cpp.

5.1.4.7 GeneratePhotonsFromGas()

```
std::vector< Photon > ParticleTrack::GeneratePhotonsFromGas ( ) const
```

Generate Cherenkov photons from gas according to Frank-Tamm relation

Definition at line 90 of file ParticleTrack.cpp.

5.1.4.8 TrackThroughRadiatorCell()

```
void ParticleTrack::TrackThroughRadiatorCell (
    const RadiatorCell & Cell )
```

Track particle through radiator cell

Definition at line 42 of file ParticleTrack.cpp.

5.1.4.9 TrackThroughTracker()

```
void ParticleTrack::TrackThroughTracker (
    const TrackingVolume & InnerTracker )
```

Track particle through inner tracker with magnetic field

Definition at line 25 of file ParticleTrack.cpp.

The documentation for this class was generated from the following files:

- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/ParticleTrack.h
- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/ParticleTrack.cpp

5.2 Photon Struct Reference

```
#include <Photon.h>
```

Public Types

- enum Radiator { Radiator::Aerogel, Radiator::Gas, Radiator::Unknown }

Public Member Functions

- Photon (const Vector &Position, const Vector &Direction, double Energy)

Public Attributes

- [Vector m_Position](#)
- const [Vector m_EmissionPoint](#)
- [Vector m_Direction](#)
- const double [m_Energy](#)
- [Radiator m_Radiator](#)

5.2.1 Detailed Description

Definition at line 14 of file Photon.h.

5.2.2 Member Enumeration Documentation

5.2.2.1 Radiator

```
enum Photon::Radiator [strong]
```

Enum class classifying which radiator the photon was emitted from

Enumerator

Aerogel	
Gas	
Unknown	

Definition at line 18 of file Photon.h.

5.2.3 Constructor & Destructor Documentation

5.2.3.1 Photon()

```
Photon::Photon (
    const Vector & Position,
    const Vector & Direction,
    double Energy )
```

Construct a photon with position, direction and energy

Parameters

<i>Position</i>	Position vector
<i>Direction</i>	Direction vector
<i>Energy</i>	Photon energy

Definition at line 5 of file Photon.cpp.

5.2.4 Member Data Documentation

5.2.4.1 m_Direction

`Vector Photon::m_Direction`

`Photon` direction vector

Definition at line 37 of file Photon.h.

5.2.4.2 m_EmissionPoint

`const Vector Photon::m_EmissionPoint`

Emission point

Definition at line 33 of file Photon.h.

5.2.4.3 m_Energy

`const double Photon::m_Energy`

`Photon` energy

Definition at line 41 of file Photon.h.

5.2.4.4 m_Position

`Vector Photon::m_Position`

`Photon` position in local cell coordinates, in m

Definition at line 29 of file Photon.h.

5.2.4.5 m_Radiator

`Radiator Photon::m_Radiator`

Flag specifying which radiator the photon was emitted from

Definition at line 45 of file Photon.h.

The documentation for this struct was generated from the following files:

- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/Photon.h
- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/Photon.cpp

5.3 PhotonHit Struct Reference

```
#include <SiPM.h>
```

Public Member Functions

- `PhotonHit` (double `x`, double `y`, const `Photon` *`photon`)

Public Attributes

- const double `x`
- const double `y`
- const `Photon` * `m_Photon`

5.3.1 Detailed Description

`SiPM` represents a single Silicon Photo-Multiplier, which is located on the detector plane of each radiator cell. All positions are in the local radiator coordinate system.

Definition at line 14 of file SiPM.h.

5.3.2 Constructor & Destructor Documentation

5.3.2.1 PhotonHit()

```
PhotonHit::PhotonHit (
    double x,
    double y,
    const Photon * photon ) [inline]
```

Constructor saving the photon hits

Definition at line 18 of file SiPM.h.

5.3.3 Member Data Documentation

5.3.3.1 m_Photon

```
const Photon* PhotonHit::m_Photon
```

Pointer to the photon that caused this hit

Definition at line 27 of file SiPM.h.

5.3.3.2 x

```
const double PhotonHit::x
```

Detector hit coordinates

Definition at line 22 of file SiPM.h.

5.3.3.3 y

```
const double PhotonHit::y
```

Definition at line 23 of file SiPM.h.

The documentation for this struct was generated from the following file:

- [/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/SiPM.h](#)

5.4 RadiatorCell Class Reference

```
#include <RadiatorCell.h>
```

Public Member Functions

- [RadiatorCell](#) (const [Vector](#) &Position)
- double [GetRadiatorThickness](#) () const
- double [GetVesselThickness](#) () const
- double [GetCoolingThickness](#) () const
- double [GetAerogelThickness](#) () const
- const [Vector](#) & [GetMirrorCentre](#) () const
- double [GetMirrorCurvature](#) () const
- const [Vector](#) & [GetRadiatorPosition](#) () const

Public Attributes

- [SiPM m_Detector](#)

5.4.1 Detailed Description

Definition at line 16 of file RadiatorCell.h.

5.4.2 Constructor & Destructor Documentation

5.4.2.1 RadiatorCell()

```
RadiatorCell::RadiatorCell (
    const Vector & Position )
```

Constructor that sets up the geometry

Parameters

<i>Position</i>	Position of radiator cell in global coordinates
-----------------	---

Definition at line 5 of file RadiatorCell.cpp.

5.4.3 Member Function Documentation

5.4.3.1 GetAerogelThickness()

```
double RadiatorCell::GetAerogelThickness ( ) const
```

Get thickness of aerogel

Definition at line 27 of file RadiatorCell.cpp.

5.4.3.2 GetCoolingThickness()

```
double RadiatorCell::GetCoolingThickness ( ) const
```

Get thickness of cooling plate

Definition at line 23 of file RadiatorCell.cpp.

5.4.3.3 GetMirrorCentre()

```
const Vector & RadiatorCell::GetMirrorCentre ( ) const
```

Get the mirror centre of curvature

Definition at line 31 of file RadiatorCell.cpp.

5.4.3.4 GetMirrorCurvature()

```
double RadiatorCell::GetMirrorCurvature ( ) const
```

Get the mirror curvature

Definition at line 40 of file RadiatorCell.cpp.

5.4.3.5 GetRadiatorPosition()

```
const Vector & RadiatorCell::GetRadiatorPosition ( ) const
```

Get the radiator cell position in the global coordinates

Definition at line 44 of file RadiatorCell.cpp.

5.4.3.6 GetRadiatorThickness()

```
double RadiatorCell::GetRadiatorThickness ( ) const
```

Get total radiator cell thickness

Definition at line 15 of file RadiatorCell.cpp.

5.4.3.7 GetVesselThickness()

```
double RadiatorCell::GetVesselThickness ( ) const
```

Get thickness of vessel

Definition at line 19 of file RadiatorCell.cpp.

5.4.4 Member Data Documentation

5.4.4.1 m_Detector

`SiPM RadiatorCell::m_Detector`

The `SiPM` in the radiator cell

Definition at line 50 of file RadiatorCell.h.

The documentation for this class was generated from the following files:

- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/[RadiatorCell.h](#)
- /data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/[RadiatorCell.cpp](#)

5.5 SiPM Class Reference

```
#include <SiPM.h>
```

Public Member Functions

- [SiPM](#) ()
- void [AddPhotonHit](#) (const [Photon](#) &photon)
- void [PlotHits](#) (const std::string &Filename) const

5.5.1 Detailed Description

Definition at line 30 of file SiPM.h.

5.5.2 Constructor & Destructor Documentation

5.5.2.1 SiPM()

```
SiPM::SiPM ( )
```

Constructor setting up the detector coordinates and detector size

Definition at line 11 of file SiPM.cpp.

5.5.3 Member Function Documentation

5.5.3.1 AddPhotonHit()

```
void SiPM::AddPhotonHit (
    const Photon & photon )
```

Add a photon hit

Definition at line 17 of file SiPM.cpp.

5.5.3.2 PlotHits()

```
void SiPM::PlotHits (
    const std::string & Filename ) const
```

Plot photon hits

Definition at line 21 of file SiPM.cpp.

The documentation for this class was generated from the following files:

- [/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/SiPM.h](#)
- [/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/SiPM.cpp](#)

5.6 TrackingVolume Class Reference

```
#include <TrackingVolume.h>
```

Public Member Functions

- [TrackingVolume](#) (double Radius, double FieldStrength)
- double [GetRadius](#) () const
- double [GetFieldStrength](#) () const

5.6.1 Detailed Description

The [TrackingVolume](#) is the inner detector that contains the magnetic field and the interaction point

Definition at line 9 of file TrackingVolume.h.

5.6.2 Constructor & Destructor Documentation

5.6.2.1 TrackingVolume()

```
TrackingVolume::TrackingVolume (
    double Radius,
    double FieldStrength )
```

Constructor that sets up the geometry of the tracking volume

Parameters

<i>Radius</i>	The inner radius of the tracker
<i>FieldStrength</i>	The magnetic field strenth, in T

Definition at line 5 of file TrackingVolume.cpp.

5.6.3 Member Function Documentation

5.6.3.1 GetFieldStrength()

```
double TrackingVolume::GetFieldStrength ( ) const
```

Get magnetic field strength

Definition at line 13 of file TrackingVolume.cpp.

5.6.3.2 GetRadius()

```
double TrackingVolume::GetRadius ( ) const
```

Get inner tracking radius

Definition at line 9 of file TrackingVolume.cpp.

The documentation for this class was generated from the following files:

- [/data/lhcb/users/tat/ARC_Simulation_Reconstruction/include/TrackingVolume.h](#)
- [/data/lhcb/users/tat/ARC_Simulation_Reconstruction/src/TrackingVolume.cpp](#)

Chapter 6

File Documentation

6.1 /data/lhcb/users/tat/ARC_Simulation_Reconstruction/apps/RunARC.cpp File Reference

```
#include <vector>
